The LEGION disc represents the best in research and development. Laser cut, stainless steel and high carbon. It makes the technology developed for competition accessible to any user. Direct replacement system that does not require additional brackets or parts, it mounts like an original disc. The brake track is flexible and has the ability to expand and contract. Less vibration thanks to the free brake track (independent part). Disc design improves airflow. Thermal break between the friction surface and the support. Improved the design of the brake track windows in contact with the pads. Thinner, stronger steel support that reduces overall weight.

Features:

- Fixing: 6 holes
- Material: Steel and aluminium
- Kit of 6 screws included
- Compatible with all brands of brakes
- Weight: 86g
